Course Information

Agile project management is an innovative form of project management that has completely changed how businesses and people handle their projects. Agile does this by emphasising collaboration, flexibility and adaptability, enabling teams to deliver value quickly and efficiently. This project management course teaches you how to manage projects flexibly and adaptively, allowing you to respond to changes in the project environment and provide value to clients faster. The course first explains the basics of Agile project management (APM), its benefits and how it operates. We explore the five phases of APM and the Agile Manifesto that outlines the Agile methodology and its concepts. We explain how development teams can follow the Agile Manifesto's guidelines to operate more effectively and sustainably.

The Agile Manifesto is widely regarded as the document that launched the Agile movement. We examine its four core concepts that should be followed to develop software products successfully. We lay out the differences between the Agile methodology and the 'Waterfall' model of project management. We explain how to apply Agile principles in project management and show you how to create and manage Agile teams, plan and execute Agile projects and measure and report on project progress. The course explores different roles and responsibilities of those working on an Agile project, including the product owner, the Scrum master and the development team. One of the main benefits of Agile methodology is its ability to promote continuous improvement and learning. We demonstrate how to continuously implement feedback loops to evaluate and improve your projects.

Agile teams must be motivated and dedicated to completing the project's goals. How can you ensure your organisational structure enables staff members and managers to function as effectively and amicably as possible in a new professional setting? We teach you how to effectively manage diversity, equality and inclusion (DEI) in an Agile team. Agile project management is a game-changing approach to project management that helps you to succeed in today's fast-paced and ever-changing business environment.

Whether you want to enhance your career prospects, improve your project management skills or stay ahead of the curve, this management course is for you. Enrol and take the first step towards mastering Agile project management.

Modules Studied

Module 1: APM: Principles and Practices

Module 2: Course assessment
